Types of Grains | Grains & Legumes Nutrition Council
The pseudo-cereal group are not part of the Poaceae botanical family, in which true grains belong, however they are nutritionally similar and used in similar ways to true grains. Many of these, such as amaranth , buckwheat and quinoa (pronounced keen-wah), are not actually grains but are in fact seeds from a number of different plant species external to the Poaceae family.

Difference Between Cereals & Grains | LEAFtv

The terms "grain" and "cereal" actually refer to the same item, grasses cultivated from the edible portions of their fruit seeds, which also leads to the term "cereal grains." In their natural state, all cereal grains are whole grains. In more common usage, the term "cereal" refers primarily to commercial breakfast cereals, which consist of refined grain instead of whole grain. In this sense, the terms "grain" and "cereal" refer to very different things.
