At the same time, however, there is evidence that although the DNA of living cells is continually damaged by natural background radiation, free radicals, and other naturally occurring processes, most of the damage is normally repaired.

The DNA damage in germ cell is of three main types viz. the damage which is immediately repaired, survival; despite the damage which may cause unexpected death, apoptosis. DNA repair system in reproductive cell achieves repair of genomic mutations formed by genotoxicant factors or serves limited number of mutations. The main

repair mechanisms used in germ cells are NER, BER, MMR, DSB, etc. DNA

### DNA: Damage Types and Repair Mechanisms (With Diagram)

DNA has many elaborate mechanisms to repair any damage or distortion. The most frequent sources of damage to DNA are the inaccuracy in DNA replication and chemical changes in DNA. Malfunction of the process of replication can lead to incorporation of wrong bases, which are mismatched with the complementary strand. **Mechanisms of DNA damage repair in adult stem cells and ...**

The type of DNA damage repair that a cell will invoke depends on both the nature of the DNA lesion, summarized in Fig. 1, and how the cell detects this genomic aberration.
