The founders of geology at the beginning of the last century were suspicious of laboratories. Hutton's well-known dictum illustrates the point: "There are also superficial reasoning men . . . they judge of the great operations of the mineral kingdom from having kindled a fire, and looked into the bottom of a little crucible.

mineralization than other geochemical methods, 3)
groundwaters are chemically reactive with mineralization and host rocks, in particular where waters are O₂-bearing, 4) groundwater flows away from the site of reaction with mineralization, providing a potentially broader exploration target than litho-geochemistry, 5) sample preparation is relatively simple i.e., most modern analytical techniques
APPLICATION OF ROBUST STATISTICS IN THE ANALYSIS OF ...

In mineral exploration, regional geochemical surveys are widely used, and these often benefit from a statistical analysis of the resulting data. However, classical statistics often fail to describe the data adequately. In this study robust and resistant methods which improve the characterisation of uni- and multivariate element behaviour are presented. For the univariate case these are
