Predation - Wikipedia

Predation is a biological interaction where one organism, the predator, kills and eats another organism, its prey. It is one of a family of common feeding behaviours that includes parasitism and micropredation (which usually do not kill the host) and parasitoidism (which always does, eventually).

Predation | Define Predation at Dictionary.com

a relation between animals in which one organism captures and feeds on others.

Predation | Definition of Predation by Merriam-Webster

1: the killing by one living organism of another for food
These small fish are most vulnerable to predation just after sunset, when larger fish, such as barracuda and jacks, chase them into the shallow water near shore to feed on them.

Predation CrossFit Spokane

Predation (Pre-da-tion): The act or practice of being a predator. To capture prey as means of survival. The unifying theme in all classifications of predation is the predator lowering the fitness of its prey by bettering its own fitness, or put another way, it reduces its prey's chances of winning and takes home the prize for itself.

Pr dateur Wikip dia

Un pr dateur est un organisme vivant qui tue des proies pour s'en nourrir ou pour alimenter sa prog niture. La pr dation est courante dans la nature o les pr dateurs jouent un r le pr pond rant dans le maintien des quilibres cologiques.

Domestic sheep predation - Wikipedia

Other than parasites and disease, predation is a threat to sheep health and thereby the profitability of sheep raising. Sheep have very little ability to defend themselves, even when compared with other prey species kept as livestock.
