It is difficult for me to forget the mild sense of betrayal I felt some ten years ago when I discovered, with considerable dismay, that my two favorite books on linear system theory - Desoer's Notes for a Second Course on Linear Systems and Brockett's Finite Dimensional Linear Systems - were both out of print.

State-space representation - Wikipedia

In control engineering, a state-space representation is a mathematical model of a physical system as a set of input, output and state variables related by first-order differential equations or difference equations.

What Are State-Space Models? - MATLAB & Simulink

Discrete-time state-space models provide the same type of linear difference relationship between the inputs and outputs as the linear ARMAX model, but are rearranged such that there is only one delay in the expressions.

State Space Representations of Linear Physical Systems

A n th order linear physical system can be represented using a state space approach as a single first order matrix differential equation: The first equation is called the state equation and it has a first order derivative of the state variable(s) on the left, and the state variable(s) and input(s), multiplied by matrices, on the right.

Lecture 1: Input/Output and State-Space Models

3.1.1.3 What is a linear/nonlinear system? A system is called linear if its behavior set satisfies linear superposition laws, i.e. when for every $z_1, z_2 \in B$ and $c \in \mathbb{R}$ we have $z_1 + z_2 \in B$ and $cz_1 \in B$.

Control Systems/State-Space Equations - Wikibooks, open ...

In a state space system, the internal state of the system is explicitly accounted for by an equation known as the state equation. The system output is given in terms of a combination of the current system state, and the current system input, through the output equation.

i.e., mapping from input to state and output is causal (with xed initial state) Linear dynamical systems with inputs & outputs 13.27, now consider xed nal state $x(T)$: for $t \leq T$, $x(t) = e^{(t-T)A}x(T) + \int_t^T e^{(t-\tau)A}B u(\tau) d\tau$, i.e., current state (and output) depend on future input! so for xed nal condition, same system is anti-causal Linear dynamical systems with inputs
